## Technical Documentation of (EU) No 617/2013

Product category  Manufacturer name, address  Manufacturer name, address  Product model number  Product model number  Aspire F5-522  Year of manufacture  ETEC allowance with capability adjustments when discrete graphics cards are disabled (from 1 January 2016)  ETEC allowance with capability adjustments when discrete graphics cards are enabled (from 1 January 2016)  Whether all discrete graphics card are enabled during the test Whether switchable graphics mode with UMA is driving the display during the test  ETEC of highest power-demanding configuration  Idle state power demand  Sleep mode power demand  Off mode power demand  Off mode with WOL enabled power demand  Off mode with WOL enabled power demand  Off mode with WOL enabled power demand  Maximum power demand  Mot applicable  Not applicable	Product type	Notebook computer
Manufacturer name, address  Viale De Gasperi 88/A 20017 Mazzo di Rho ( MI) Italy  Product model number  Aspire F5-522  Year of manufacture  ETEC allowance with capability adjustments when discrete graphics cards are disabled (from 1 January 2016)  ETEC allowance with capability adjustments when discrete graphics cards are enabled (from 1 January 2016)  Whether all discrete graphics card are enabled during the test Whether switchable graphics mode with UMA is driving the display during the test ETEC of highest power-demanding configuration Idle state power demand Sleep mode power demand Sleep mode with WOL enabled power demand Off mode power demand Off mode with WOL enabled power demand Maximum power demand Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that		A
Product model number  Aspire F5-522  Year of manufacture  ETEC allowance with capability adjustments when discrete graphics cards are enabled (from 1 January 2016)  Whether all discrete graphics card are enabled during the test Whether switchable graphics mode with UMA is driving the display during the test ETEC of highest power-demand graphics mode with UMA is driving the display during the test ETEC of highest power-demand graphics mode with UMA is driving the display during the test ETEC of highest power demand  Idle state power demand  Sleep mode power demand  Off mode power demand  Maximum power demand  Maximum power demand  Maximum power demand  Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that		Acer Italy srl
Product model number  Product model number  Aspire F5-522  Year of manufacture  ETEC allowance with capability adjustments when discrete graphics cards are enabled (from 1 January 2016)  Whether all discrete graphics card are enabled from 1 January 2016)  Whether all discrete graphics card are enabled during the test Whether switchable graphics mode with UMA is driving the display during the test ETEC of highest power-demanding configuration Idle state power demand Sleep mode power demand Sleep mode power demand Off mode power demand Off mode power demand Maximum power demand Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply (SEPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that	Manufacturer name, address	Viale De Gasperi 88/A
Product model number  Aspire F5-522  Year of manufacture  ETEC allowance with capability adjustments when discrete graphics cards are disabled (from 1 January 2016)  ETEC allowance with capability adjustments when discrete graphics cards are enabled (from 1 January 2016)  Whether all discrete graphics card are enabled during the test Whether switchable graphics mode with UMA is driving the display during the test ETEC of highest power-demanding configuration Idle state power demand Sleep mode with WOL enabled power demand Off mode power demand Off mode with WOL enabled power demand Off mode with WOL enabled power demand Off mode with WOL enabled power demand Not applicable  Not applicable Not applicable Not applicable Not applicable Not applicable Not applicable Not applicable  Not applicable Servand Not applicable Not applicable Not applicable Not applicable Not applicable Not applicable Servand Not applicable		•
Year of manufacture 2016  ETEC allowance with capability adjustments when discrete graphics cards are disabled (from 1 January 2016)  ETEC allowance with capability adjustments when discrete graphics cards are enabled (from 1 January 2016)  Whether all discrete graphics card are enabled during the test Whether switchable graphics mode with UMA is driving the display during the test ETEC of highest power-demanding configuration Idle state power demand Sleep mode power demand Sleep mode with WOL enabled power demand Off mode with WOL enabled power demand Off mode with WOL enabled power demand Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that		, ,
E <sub>TEC</sub> allowance with capability adjustments when discrete graphics cards are disabled (from 1 January 2016)  E <sub>TEC</sub> allowance with capability adjustments when discrete graphics cards are enabled (from 1 January 2016)  Whether all discrete graphics card are enabled during the test Whether switchable graphics mode with UMA is driving the display during the test E <sub>TEC</sub> of highest power-demanding configuration Idle state power demand Sleep mode power demand Sleep mode with WOL enabled power demand Off mode with WOL enabled power demand Off mode with WOL enabled power demand Not applicable Not applicable Not applicable Not applicable Not applicable Not applicable  Not applicable  Not applicable Not applicable Service (Incompany) Not applicable Not applicable Not applicable Not applicable Not applicable Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that	Product model number	Aspire F5-522
adjustments when discrete graphics cards are disabled (from 1 January 2016)  ETEC allowance with capability adjustments when discrete graphics cards are enabled (from 1 January 2016)  Whether all discrete graphics card are enabled during the test Whether switchable graphics mode with UMA is driving the display during the test ETEC of highest power-demanding configuration  Idle state power demand Sleep mode with WOL enabled power demand Off mode power demand Off mode power demand Off mode with WOL enabled power demand Maximum power demand Maximum power demand Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that	Year of manufacture	2016
are disabled (from 1 January 2016)  ETEC allowance with capability adjustments when discrete graphics cards are enabled (from 1 January 2016)  Whether all discrete graphics card are enabled during the test Whether switchable graphics mode with UMA is driving the display during the test ETEC of highest power-demanding configuration Idle state power demand Sleep mode with WOL enabled power demand Off mode power demand Off mode with WOL enabled power demand Maximum power demand Maximum power demand Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that	E <sub>TEC</sub> allowance with capability	
E <sub>TEC</sub> allowance with capability adjustments when discrete graphics cards are enabled (from 1 January 2016) Whether all discrete graphics card are enabled during the test Whether switchable graphics mode with UMA is driving the display during the test E <sub>TEC</sub> of highest power-demanding configuration Idle state power demand Sleep mode power demand Sleep mode with WOL enabled power demand Off mode power demand Off mode with WOL enabled power demand Maximum power demand Maximum power demand Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that	adjustments when discrete graphics cards	27 kWh/year
adjustments when discrete graphics cards are enabled (from 1 January 2016)  Whether all discrete graphics card are enabled during the test  Whether switchable graphics mode with UMA is driving the display during the test  E <sub>TEC</sub> of highest power-demanding configuration  Idle state power demand  Sleep mode power demand  Off mode power demand  Off mode with WOL enabled power demand  Off mode with WOL enabled power demand  Maximum power demand  Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode  Minimum number of loading cycles that	are disabled (from 1 January 2016)	
are enabled (from 1 January 2016)  Whether all discrete graphics card are enabled during the test  Whether switchable graphics mode with UMA is driving the display during the test  E <sub>TEC</sub> of highest power-demanding configuration  Idle state power demand  Sleep mode power demand  Sleep mode with WOL enabled power demand  Off mode power demand  Off mode with WOL enabled power demand  Maximum power demand  Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power  External power supply's (EPS) average active efficiency  Not applicable	E <sub>TEC</sub> allowance with capability	
are enabled (from 1 January 2016)  Whether all discrete graphics card are enabled during the test  Whether switchable graphics mode with UMA is driving the display during the test  E <sub>TEC</sub> of highest power-demanding configuration  Idle state power demand  Sleep mode power demand  Sleep mode with WOL enabled power demand  Off mode power demand  Off mode with WOL enabled power demand  Maximum power demand  Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power  External power supply's (EPS) average active efficiency  Not applicable	adjustments when discrete graphics cards	Not applicable
Whether all discrete graphics card are enabled during the test Whether switchable graphics mode with UMA is driving the display during the test  E_TEC of highest power-demanding configuration  Idle state power demand  Sleep mode power demand  Sleep mode with WOL enabled power demand  Off mode power demand  Off mode with WOL enabled power demand  Maximum power demand  Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency  Not applicable		
enabled during the test  Whether switchable graphics mode with  UMA is driving the display during the test  E <sub>TEC</sub> of highest power-demanding configuration  Idle state power demand Sleep mode power demand Sleep mode with WOL enabled power demand Off mode with WOL enabled power demand Not applicable	, ,	
Whether switchable graphics mode with  UMA is driving the display during the test  E <sub>TEC</sub> of highest power-demanding configuration  Idle state power demand Sleep mode power demand Off mode with WOL enabled power demand Off mode with WOL enabled power demand Off mode with WOL enabled power demand Not applicable		Not applicable
UMA is driving the display during the test  E <sub>TEC</sub> of highest power-demanding configuration  Idle state power demand Sleep mode power demand Sleep mode with WOL enabled power demand Off mode power demand Off mode with WOL enabled power demand Not applicable  Output power  External power supply's (EPS) average active efficiency  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode  Minimum number of loading cycles that		Nist speliesble
configuration  Idle state power demand  Sleep mode power demand  Sleep mode with WOL enabled power demand  Off mode power demand  Off mode with WOL enabled power demand  Off mode with WOL enabled power demand  Maximum power demand  Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power  External power supply's (EPS) average active efficiency  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode  Minimum number of loading cycles that	UMA is driving the display during the test	Not applicable
configuration Idle state power demand Sleep mode power demand Sleep mode with WOL enabled power demand Off mode power demand Off mode power demand Off mode with WOL enabled power demand Off mode with WOL enabled power demand Not applicable  Not applicable Not applicable  Not applicable  Not applicable  Not applicable Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that	E <sub>TEC</sub> of highest power-demanding	22.70 kWh/yoor
Sleep mode power demand  Sleep mode with WOL enabled power demand  Off mode power demand  Off mode with WOL enabled power demand  Maximum power demand  Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power  External power supply's (EPS) average active efficiency  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode  Minimum number of loading cycles that	configuration	23.79 KWII/year
Sleep mode with WOL enabled power demand  Off mode power demand  Off mode with WOL enabled power demand  Maximum power demand  Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency  Not applicable  Not applicable  Not applicable  Not applicable  2.60 B  88.97%  88.97%  88.97%  88.97%  88.97%  2.60 B  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode  Minimum number of loading cycles that	Idle state power demand	8.08 Watt
demand  Off mode power demand  Off mode with WOL enabled power demand  Maximum power demand  Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power  External power supply's (EPS) average active efficiency  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode  Minimum number of loading cycles that		0.46 Watt
Off mode power demand Off mode with WOL enabled power demand  Maximum power demand Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that	Sleep mode with WOL enabled power	Not applicable
Off mode with WOL enabled power demand  Maximum power demand Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that		
Maximum power demand Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that  Not applicable Not applicable Not applicable Not applicable 288.97% 288.97%		0.41 Watt
Maximum power demand Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power External power supply's (EPS) average active efficiency Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that	•	Not applicable
Internal power supply (IPS) efficiency at 10 %, 20 %, 50 % and 100 % of rated output power  External power supply's (EPS) average active efficiency  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode  Minimum number of loading cycles that		
10 %, 20 %, 50 % and 100 % of rated  output power  External power supply's (EPS) average active efficiency  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode  Minimum number of loading cycles that	<u>'</u>	Not applicable
output power  External power supply's (EPS) average active efficiency  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode  Minimum number of loading cycles that		
External power supply's (EPS) average active efficiency  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode  Minimum number of loading cycles that		Not applicable
active efficiency  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode  Minimum number of loading cycles that		
Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode  Minimum number of loading cycles that		88.97%
sound power level, L <sub>WAd</sub> ) of idle mode  Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random 2.70 B seek" mode  Minimum number of loading cycles that	•	
Noise levels (the declared A-weighted sound power level, L <sub>WAd</sub> ) of "HDD random 2.70 B seek" mode  Minimum number of loading cycles that	,	2.60 B
sound power level, L <sub>WAd</sub> ) of "HDD random seek" mode Minimum number of loading cycles that 400 cycles		
seek" mode  Minimum number of loading cycles that  400 cycles	•	2 70 R
Minimum number of loading cycles that 400 cycles		2.70 5
400 cycles		
ILIO DALLOHOO VAH WILHOLAHA	the batteries can withstand	400 cycles

Configuration of memory	2~16 GB
Configuration of internal storage	1 piece
Configuration of discrete television tuner	0 piece
Configuration of discrete audio card	0 piece
Configuration of discrete graphics cards	0 piece
Configuration of discrete graphics cards category	Not applicable
The external package of the notebook provides the information, "The battery in this product cannot be easily replaced by users themselves."	Yes
For products with an integrated display,	0
the total content of mercury is	0 mg
Measurement methodology for E <sub>TEC</sub>	COMMISSION REGULATION (EU) No 617/2013 of 26 June 2013 implementing Directive 2009/125/EC of the European Parliament and of the Council with regard to ecodesign requirements for computers and computer servers:  ANNEX II Ecodesign requirements and timetable:  1.3.1. E <sub>TEC</sub> formula.
Measurement methodology for idle mode	EN 62623:2013 — Desktop and notebook computers — Measurement of energy consumption: 5.2. Test setup; 5.3.4. Measuring long idle mode; 5.7. True RMS watt meter specification; 5.8. True RMS watt meter accuracy; Annex E.2 (informative) ENERGY STAR® V5 compliant testing methodology.
Measurement methodology for sleep mode	EN 62623:2013 — Desktop and notebook computers — Measurement of energy consumption: 5.2. Test setup; 5.3.3. Measuring sleep mode; 5.4. Test conditions; 5.7. True RMS watt meter specification; 5.8. True RMS watt meter accuracy.

	EN 00002-0040 D 14 1 1 1 1
Measurement methodology for off mode  Measurement methodology for IPS	EN 62623:2013 — Desktop and notebook computers — Measurement of energy consumption: 5.2. Test setup; 5.3.2. Measuring off mode; 5.4. Test conditions; 5.7. True RMS watt meter specification; 5.8. True RMS watt meter accuracy.
efficiency	Not applicable
Measurement methodology for EPS efficiency	EN 50563:2011 External a.c.—d.c. and a.c.—a.c. power supplies — Determination of no-load power and average efficiency of active modes.
Measurement methodology for noise level	ECMA-109 2nd edition (December 1987) Declared Noise Emission Values of Computer and Business Equipment: 4. Determination of the declared noise emission values. ECMA-74 11th edition (December 2010) Measurement of Airborne Noise emitted by Information Technology and Telecommunications Equipment: 5. Installation and operating instructions; 6. Method for determination of sound power levels of equipment in reverberation test rooms; 7. Method for determination of sound power levels of equipment under essentially free-field conditions over a reflecting plane; Annex C.15 Equipment category: personal computers and workstations.

Measurement methodology for battery loading cycles	EN 61960:2011 Secondary cells and batteries containing alkaline or other non-acid electrolytes — Secondary lithium cells and batteries for portable applications: 7.6.1 General; 7.6.3 Endurance in cycles (accelerated test procedure).
Sequence of steps for achieving a stable condition with respect to power demand	EN 62623:2013 — Desktop and notebook computers — Measurement of energy consumption: 5.2. Test setup; 5.3.2. Measuring off mode; 5.3.3. Measuring sleep mode; 5.3.4. Measuring long idle mode.
Description of how sleep mode was selected or programmed	EN 62623:2013 — Desktop and notebook computers — Measurement of energy consumption: 5.2. Test setup; 5.3.3. Measuring sleep mode.
Description of how off mode was selected or programmed	EN 62623:2013 — Desktop and notebook computers — Measurement of energy consumption: 5.2. Test setup; 5.3.2. Measuring off mode.
Sequence of events required to reach the mode where the equipment automatically changes to sleep mode	ENERGY STAR® Program Requirements Product Specification for Computers, Eligibility Criteria Version 6.0, Rev. Oct- 2013: 1.D.4 Sleep Mode.
Sequence of events required to reach the mode where the equipment automatically changes to off mode	Not applicable

<del></del>	1
The duration of idle state condition before the computer automatically reaches sleep mode, or another condition which does not exceed the applicable power demand requirements for sleep mode	30 minutes
The length of time after a period of user inactivity in which the computer automatically reaches a power mode that has a lower power demand requirement than sleep mode	30 minutes
The length of time before the display sleep mode is set to activate after user inactivity	10 minutes
