# Upgrading your Computer

**In this section, you will find:**

- Instructions on how to replace a hardware component

# 1. UPGRADING YOUR COMPUTER

---

## Installation precautions

Before you install any computer component, we recommend that you read the following sections. These sections contain important ESD precautions along with pre-installation and post-installation instructions.

### ESD precautions

Electrostatic discharge (ESD) can damage your processor, disk drives, expansion boards, and other components. Always observe the following precautions before you install a computer component:

1. Do not remove a component from its protective packaging until you are ready to install it.
2. Wear a wrist grounding strap and attach it to a metal part of the computer before handling components. If a wrist strap is not available, maintain contact with the computer throughout any procedure requiring ESD protection.

### Required tools

In performing the component replacement process, you will need the following tools:

- Philips screwdriver
- Hex screwdriver
- Flat screwdriver
- Scissors

#### Note

*The screws for the different components vary in size. During the disassembly process, group the screws with their corresponding components to avoid mismatches when putting back the components.*

## Pre-installation instructions

Always observe the following before you install any component:

1. Make sure that the ODD and card reader slot is empty.
2. Turn off the power to the computer and all peripherals.
3. Unplug the power cord from the computer.
4. Unplug the network cable and all connected peripheral devices from the computer.
5. Place the computer on a flat, steady surface.
6. Open your computer according to the instructions on Removing the rear system cover on page 7 and Removing the left side system cover on page 9.
7. See the following sections for specific instructions on the component you wish to install.

### Warning

**Not turning off the computer properly before you start installing the components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.**

## Post-installation instructions

Observe the following after installing a computer component:

1. See to it that the components are installed according to the step-by-step instructions in their respective sections.
2. Replace any expansion boards or peripherals that you removed earlier.
3. Replace the system covers. See Installing the left side system cover on page 10 and Installing the rear system cover on page 8.
4. Connect the necessary cables.
5. Turn on your computer.

# System Upgrade

## Removing the left side system cover

1. Before you proceed, make sure that you have turned off your computer and all peripherals connected to it. Read the Pre- installation instructions on page 6.
2. Remove the two screws that secure the system cover to the computer.
3. Slide the cover toward the back of the computer and pull away from the side of the computer.

4. Set the cover aside for re-installation later.

## Installing the left side system cover

1. Align the cover to the sides of the computer and slide the cover toward the front of the computer.
2. Secure the cover with two screws.

3. Observe the Post-installation instructions on page 6.

## Removing the Right side system cover

1. Before you proceed, make sure that you have turned off your computer and all peripherals connected to it. Read the Pre- installation instructions on page 6.
2. Remove the two screws that secure the system cover to the computer.
3. Slide the cover toward the back of the computer and pull away from the side of the computer.

4. Set the cover aside for re-installation later.

## Installing the Right side system cover

1. Align the cover to the sides of the computer and slide the cover toward the front of the computer.
2. Secure the cover with two screws.

3. Observe the Post-installation instructions on page 6.

## Hard drives

The computer supports installation of one 3.5-inch SATA hard drives in the internal HDD cage.

### Removing the 3.5-inch hard drives

1. Perform Pre-installation instructions on page 6.
2. Disconnect the power and data cables from the hard drives.

3. Remove the one screws that secure the hard drives to the bracket

4. Remove the hard drives from the bracket.

## Installing the 3.5-inch hard drives

1. Remove the new hard drive from their packaging.
2. Insert the new hard drive into the bracket.

3. Secure the new hard drive with one screw.

4. Connect the power and data cables to the hard drive.

5. Observe the Post-installation instructions on page 6

# Memory

The computer has four DDR4 U-DIMM slots that support up to 64 GB maximum system memory.

## Memory configuration guidelines

- To ensure data integrity, use only Acer-approved DDR4 2400 MHz or DDR4 2666 MHz type memory modules.
- Memory modules must be installed starting with DIMM3 slot.
- Always handle memory modules by its edges.
- When installing memory modules, populate the DIMM slots according to the table below.

Size	DIMM1	DIMM2	DIMM3	DIMM4
4GB	N/A	N/A	4GB	N/A
8GB	N/A	N/A	4GB	4GB
12GB	4GB	N/A	4GB	4GB
16GB	4GB	4GB	4GB	4GB
8GB	N/A	N/A	8GB	N/A
16GB	N/A	N/A	8GB	8GB
24GB	8GB	N/A	8GB	8GB
32GB	8GB	8GB	8GB	8GB
16GB	N/A	N/A	16GB	N/A
32GB	N/A	N/A	16GB	16GB
48GB	16GB	N/A	16GB	16GB
64GB	16GB	16GB	16GB	16GB

## Removing a memory module

1. Perform Pre-installation instructions on page 6.
2. Disconnect the thermal fan cable from the mainboard.

3. Use a long screw driver to loosen the four captive screws securing the thermal module to the mainboard.

4. Remove the thermal module from the chassis.

5. Press outward the holding clips on both sides of the DIMM slot outward to release the memory module (1).

6. Gently pull the memory module upward to remove it from the DIMM slot (2).

7. Repeat steps 5~6 to remove the other memory modules.

## Installing a memory module

### Note

*DIMM slots on the mainboard must be installed only in certain configurations. Numbers next to DIMM slots correspond to installation sequence. Be sure to install the memory module in DIMM1 slot followed by DIMM2 slot.*

1. Select an empty DIMM slot.
2. Remove the new memory module from its packaging, handling it by the edges.
3. Align then insert the memory module into the DIMM slot (1).
4. Insert the memory to the slot until the retaining clips snap inward (2).

The module is keyed so it can only be inserted in one direction. If the module does not fit, make sure that the notch in the module lines up with the tab in the memory slot.

5. Repeat steps 1~4 to install the other memory modules.

6. Place the thermal module into the chassis.

7. Use a long screw driver to tighten the four captive screws and secure the thermal module to the mainboard.

8. Connect the thermal fan cable to the mainboard.

9. Observe the Post-installation instructions on page 6.

## Graphic board

The computer contains one or two Graphic boards installed in the PCIe x16 slots. The detail configuration will be differed by different models.

### Removing the Graphic board

1. Perform Pre-installation instructions on page 6.
2. Disconnect the power cables from the Graphic board.

3. Remove the tape and disconnect the bridge from the Graphic boards.

4. Remove the screw that secure the Graphic boards to the chassis.

5. Release the latch that secures the graphic board to the mainboard.

6. Detach the Graphic board from the PCIe x16 slot.

## Installing the Graphic board

1. Remove the new graphic board from its packaging.
2. Insert the Graphic boards into the PCIe x16 slot and press it down until it latches into place.

**[Note] For replace/upgrade graphic board, please check the specification of graphic board & power supply first in order to make sure the graphic board and power supply could work.**

3. Secure the Graphic board with screws.

4. Connect the bridge from the graphic board.

5. Connect the power cables to the Graphic boards.

6. Observe the Post-installation instructions on page 6

## M.2 SSD module

The computer contains one M.2 SSD module installed in the M.2 PCIe slot.

### Removing the M.2 SSD module

1. Perform Pre-installation instructions on page 6.
2. Remove the Graphic board. See Removing the Graphic board.
3. Remove the screws that secures the thermal heat-sink module from the mainboard

4. Remove the thermal heat-sink module from the mainboard.

5. Detach the M.2 SSD module from the mainboard.

## Installing the M.2 SSD module

1. Remove the new M.2 SSD module from its packaging.
2. Insert the M.2 SSD module into its slot in the mainboard.

3. Insert the thermal heat-sink module to the mainboard.

4. Secure the M.2 SSD and thermal module with screws.

5. Replace the Graphic board. See Installing the Graphic board.
6. Observe the Post-installation instructions on page 6.

## ODD drives

The computer supports installation of one ODD drives.

### Open ODD door.

1. Perform Pre-installation instructions on page 6.
2. Push triangle icon for opening.

# PredatorSense

**In this section, you will find:**

- Introduction to the PredatorSense utility
- How to use PredatorSense

## 2 PREDATORSENSE

PredatorSense (DT) is an Acer proprietary utility to enhance the user experience of Gaming products on Microsoft Windows 10.

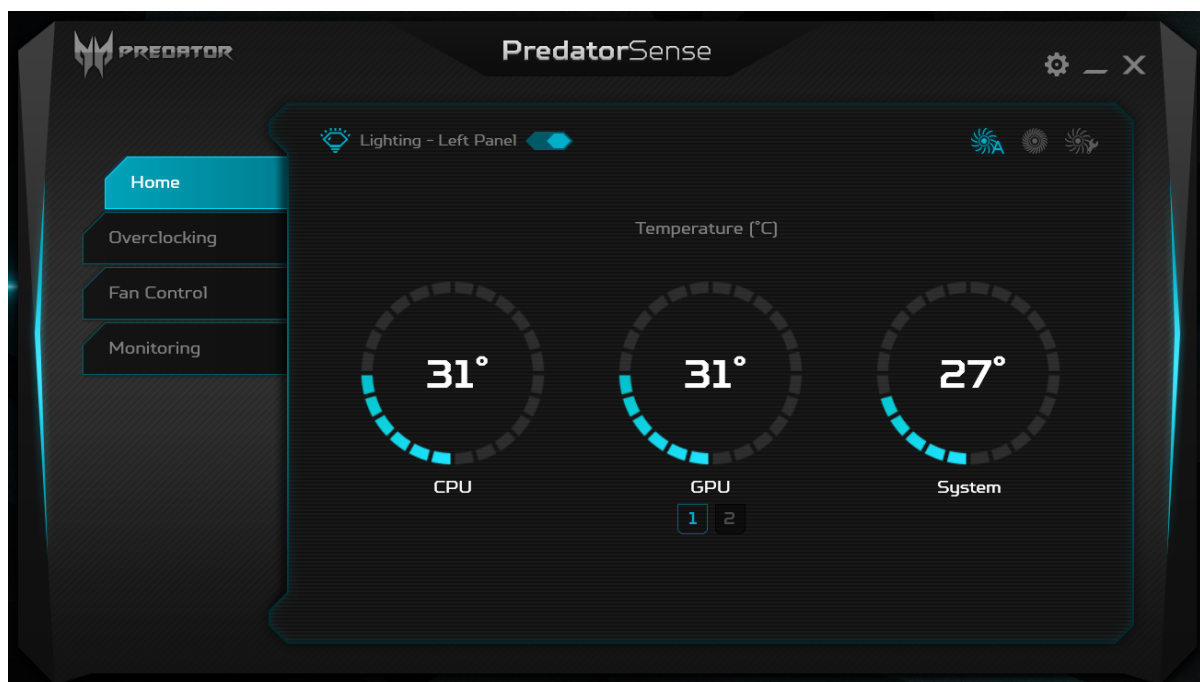

The central idea of this utility is to provide a user interface to easily control fan speed, OverClocking and also display system information.

### PredatorSense features

- **System information dashboard**
- **Fan speed control**
- **Overclocking**
- **Monitoring**
- **Advanced settings**
- **Live update**

To set up the PredatorSense application (Windows 10):

1. From the *Start menu*, select **All apps**.
2. Select **Acer**.
3. Select **PredatorSense**.

[Note] PredatorSense function is keeping increased to enlarge user experience, Any new features update excluded from user guide should be possible.

Category	Description
Home	<p><b>Provide overview of all features with quick adjustment</b></p> <ul style="list-style-type: none"> <li>• CPU/GPU/System health information</li> <li>• Fan speed control (Auto, Gaming and Silence)</li> <li>• Lighting profile</li> </ul>
Lighting	<p><b>Provide control and adjustment for the LEDs on Front Face, Left Side.</b></p> <ul style="list-style-type: none"> <li>• Color: Blues</li> </ul>
Overclocking	<p><b>Provide CPU overclocking in 3 levels, Normal, Faster and Turbo level. And show the CPU loading, frequency, Max frequency.</b></p> <ul style="list-style-type: none"> <li>• Switch OC level in Normal level or Turbo level by Predator Sense.</li> </ul>
Fan control	<p><b>Provide Fan speed control in Auto, Gaming and Custom mode for fans including, Front fan and Back fan. And show the fan speed for fans. On the Custom fan speed, user can adjust the fan speed in percentage.</b></p> <ul style="list-style-type: none"> <li>• Custom fan speed only can control by 60 ~ 100% percentage.</li> </ul>
Monitoring	<p><b>Provide 3 tabs for CPU and GPU and System.</b></p> <ul style="list-style-type: none"> <li>• Temperature in C/F</li> <li>• Loading in %</li> <li>• Frequency in MHz</li> <li>• Voltage in V</li> <li>• Fan speed in RPM</li> <li>• Download/Upload in bytes/s of WIFI/Ethernet</li> <li>• Usage in GB of RAM</li> </ul>
Advanced settings	Provide control for Units of temperature
Live update	While user launches UI first time after a restart/boot while network is available, UI will start to check Acer web service. If there is any new update for PredatorSense, PredatorSense will download (silently) and install (not silent install).

**[Note] System will appear abnormal situation or reboot when overclocking(OC)**
