

Estimated carbon footprint

**309 +/- 58<sup>†</sup> kgCO<sub>2</sub>e**

Acer carefully consider environmental factors in every stage of the product life cycle. This includes selecting materials during design, through packaging and shipping, to usage and recycling to reduce environmental impacts.

Acer uses PAIA (Product Attribute to Impact Algorithm) to perform product carbon footprints. The PAIA platform, developed based on MIT's methodology, was created to speed up the process while delivering streamlined and consistent results that are robust enough to make fact based decisions on product sustainability.

<sup>†</sup>All estimates of carbon footprint are uncertain. For this product, the 5<sup>th</sup> and 95<sup>th</sup> percentile of the carbon footprint estimate, 178 kgCO<sub>2</sub>e and 584 kgCO<sub>2</sub>e, to reflect that uncertainty. That estimate has a mean of 309 kg of CO<sub>2</sub>e and standard deviation of 58 kg of CO<sub>2</sub>e .

## Product carbon footprint by percentage

| Product breakout             | %     |
|------------------------------|-------|
| Display                      | 40.2% |
| Mainboard (and other boards) | 20.5% |
| Use                          | 15.8% |
| Power Supply Unit(s)         | 8.7%  |
| Transport                    | 4.8%  |
| Solid State Drive(s)         | 4.7%  |
| Chassis                      | 2.3%  |
| Battery                      | 2.0%  |
| Packaging                    | 0.6%  |
| End of Life                  | 0.5%  |

## General Information

|   |          |
|---|----------|
| Product Weight (excluded accessory and packaging) | 1.6 kg   |
| Panel Size  | 14"      |
| Typical Energy Consumption (Yearly TEC)           | 25.1 kWh |
| Product Lifetime                                  | 4 years  |
| Final Assembly in China and use in Europe         |          |

## About the Data

The product carbon footprint was calculated using the Product Attribute to Impact Algorithm model, Notebook tool, version 1.4.0, copyright by the ICT Benchmarking collaboration including the Massachusetts Institute of Technology's Materials Systems Laboratory and partners.

The LCA result strongly influenced by the assumptions made and PAIA tools are not configured to allow for simultaneous simulation, it is not recommended that PAIA results be used in comparisons.
