

Estimated carbon footprint

480 +/- 122[†] kgCO₂e

Acer carefully consider environmental factors in every stage of the product life cycle. This includes selecting materials during design, through packaging and shipping, to usage and recycling to reduce environmental impacts.

Acer uses PAIA (Product Attribute to Impact Algorithm) to perform product carbon footprints. The PAIA platform, developed based on MIT's methodology, was created to speed up the process while delivering streamlined and consistent results that are robust enough to make fact based decisions on product sustainability.

[†]All estimates of carbon footprint are uncertain. For this product, the 5th and 95th percentile of the carbon footprint estimate, 213 kgCO₂e and 959 kgCO₂e, to reflect that uncertainty. That estimate has a mean of 480 kg of CO₂e and standard deviation of 122 kg of CO₂e .

About the Data

The product carbon footprint was calculated using the Product Attribute to Impact Algorithm model, Desktop tool, version 1.4.0, copyright by the ICT Benchmarking collaboration including the Massachusetts Institute of Technology's Materials Systems Laboratory and partners.

The LCA result is strongly influenced by the assumptions made and PAIA tools are not configured to allow for simultaneous simulation, it is not recommended that PAIA results be used in comparisons.
